**DETAILED ACTION*****Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the light emitters and magnetic coils must be shown in the same drawing or the feature(s) canceled from the claim(s). No new matter should be entered. No figure contains both label 4 and label 5 as required by claim 1.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-13 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

Art Unit: 3739

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

The following terms are not clearly defined:

Optional spatial form

Freely spaced and optionally shaped

Lights emitters are electromagnetic emitters

Slightly above – relative term

The claims require AC voltage, yet diodes require DC voltage.

Claim 1 recites the limitation "the control system" in line 37. There is insufficient antecedent basis for this limitation in the claim.

Claim 5 contains an improper Markush group.

Claims 6-9, 12 and 13 have improper multiple dependent claims.

Claim 6 is indefinite as the term "in series or in quads" is not defined.

Claim 10 is indefinite as it fails to positively define a structure.

### ***Conclusion***

The examiner was not able to properly construct a 35 U.S.C. § 103 rejection due to the indefinite claim structure, however, it appears that the following patents might be used in an obviousness rejection over at least claim 1:

U.S. Patent 6,899,667 – coils in a sleeping surface

U.S. Patent 6,443,978 – combined light and magnetic flux

U.S. Patent 5,344,384 – from applicant's IDS

Art Unit: 3739

U.S. Patent Application Publication US 2003/0002297 – combined light and magnetic flux

Applicant is requested to consider the above references as the claims are clarified. It appears the very low level of magnetic flux density is unique, however, the level is not disclosed as yielding any unpredictable results and is clearly within the preferred range of Ostrow (5,344,384) of not to exceed 100 gauss.
